

GTA V 1.0.3725.0 / 1.72 December 17, 2025. [No GTA Online or FiveM](#)

Legacy Setup Size: 52 GB. Enhanced Setup size: 40 GB

1. Installation Steps([Screenshots below](#))

- * **Add antivirus scan exclusions to the main folder containing setup folder and installed game folder** and turn off realtime protection.(Virus and threat protection – Manage Settings – Add Exclusions) Exclusion eg: C,D:\Games
- * **Install utorrent/ qbittorrent** and then click magnet link or download torrent file. Then add them to torrent to start downloading to the location which is in antivirus scan exclusion C,D,E:\Games\Gamesetup and not in users folders
- * There is no virus in this, all are false positive due to cracked games (Uninstall other antivirus softwares)
- * **Install only to short location paths**, eg C,D :\Games\gamename which is in **antivirus scan exclusion and** not to program files, users or other deeppath install locations.
- * If game crash on loading screen for gta enhanced install\move only to non C drives. eg: D:\Games
- * (optional check for errors) **Verify Bin files:** Use Verify BIN files before installation.bat before setup and check if all bin files are ok. If any file is corrupt rehash/recheck it from torrent to fix
- * **Run Setup.exe** as admin
- * Use Tickmark during setup to **Enable RAM Limiter**, If PC has less than 16gb ram.
- * If PC has less than 16gb ram, **set Custom virtual memory** (In Custom size: set min to 16gb and maximum size to 64gb) (use this if still fail after using ram limiter)
- * **Install all VC++ , DirectX** etc during setup, enable tickmarks.
- * Wait for auto **Verify file integrity of gamefiles after installation of game to finish** and wait to check if all installed game files are ok
- * play using **playgtaV.bat for GTA 5 Legacy or from desktop icon**
- * play using **playgtaV.exe for GTA 5 Enhanced Edition or from desktop icon**
- * **Make sure to have enough space**, game takes more space during installation. **Enhanced 96 GB** (up to 112 GB during installation). Legacy 119 GB Free Space (upto 135 gb during installation), excluding setup size + 30 GB for safety
- * Install on ssd for fast install. (setup files can be on hdd if lacking on space) Less then 16 gb ram or older cpu will take time! Do not panic if it looks stuck, wait for progress to continue
- * **Disable smart app control, reputation based control** inside app and browser control in windows security if they block setup.
- * **GPU drivers should be latest** from driver app/ website, not through windows update
- * Latest windows 10/11 25H2+

2. Setup Crash/ Unable to progress ([Screenshots below](#))

- * Enable **RAM Limiter** in setup screen
- * **Add antivirus scan exclusions to the main folder containing setup folder and installed game folder** and turn off realtime protection.(Virus and threat protection – Manage Settings – Add Exclusions) Exclusion eg: C,D:\Games
- * Download Setup on antivirus exclusion location eg: C,D:\Games\Gamesetup and not in users folders
- * **Install only to short location paths**, eg C,D:\Games\gamename which is in antivirus scan exclusion and not to program files, users or other deeppath install locations.
- * Uninstall Other antivirus softwares.* Missing setup files can be restored from quarantine if not deleted else redownload/Recheck. * Run as Admin
- * Install to non C drives for gta enhanced. Eg D:\Games if C:\Games crash on loading screen. create new partitions or create virtual drives if no D. (Add Antivirus Exclusions to new location before!!). GTA Enhanced has a bug and crashes on C drive for some
- * Run Verify Bin files.bat before setup and verify if bin files are free of errors. Stop torrent and Recheck/rehash torrent to fix corrupted bins.
- * Increase Virtual RAM/ Pagefile to min 16gb and max to 64gb if error still persists after enabling ram limiter.
- * Provide screenshots of **Antivirus** Exclusions added, verification of bin files, screenshot of error, and system about (device type, gpu, cpu, ram, os) in comments. Use Win + R → dxdiag → Display and system tab for details
- * make sure enough space is available. Do not panic if it looks stuck, wait for progress. **Enhanced** 96 GB (up to 112 GB during installation). Legacy 119 GB Free Space (upto 135 gb during installation), excluding setup size + 30 GB for safety
- * Close all background Apps and make sure RAM is free during setup
- * Recheck torrent to make sure all downloaded torrents are not corrupt
- * **Disable smart app control, reputation based control** inside app and browser control in windows security if they block setup.
- * Remove all overlocks and make sure GPU, CPU, RAM is stable
- * Do not use PC when installing again, If you have failed installations.
- * Try installing on safemode.
- * last option: download and reinstall windows. Dont use default reset option/ reset provided by laptop/prebuilt manufacturer if its laptop. Then install drivers and run game
